Calculate the sum of an array of integers.

12 + 12 = 24.

**Answer:** (penalty regime: 0 %)

Given an array of  $n$  integers, rearrange them so that the sum of the absolute differences of all adjacent elements is minimized. Then, compute the sum of those absolute differences. Example  $n = 5$   $arr = [1, 3, 3, 2, 4]$  If the list is rearranged as  $arr' = [1, 2, 3, 3, 4]$ , the absolute differences are  $|1 - 2| = 1, |2 - 3| = 1, |3 - 3| = 0, |3 - 4| = 1$ . The sum of those differences is  $1 + 1 + 0 + 1 = 3$ . Function Description Complete the function `minDiff` in the editor below. `minDiff` has the following parameter: `arr`: an integer array Returns: `int`: the sum of the absolute differences of adjacent elements Constraints  $2 \leq n \leq 105$   $0 \leq arr[i] \leq 109$ , where  $0 \leq i < n$  Input Format For Custom Testing The first line of input contains an integer,  $n$ , the size of `arr`. Each of the following  $n$  lines contains an integer that describes `arr[i]` (where  $0 \leq i < n$ ). Sample Case 0 Sample Input For Custom Testing STDIN Function ----- 5  $\rightarrow$  `arr[]` size  $n = 5$  5  $\rightarrow$  `arr[]` = [5, 1, 3, 7, 3] 1 3 7 3 Sample Output 6 Explanation  $n = 5$   $arr = [5, 1, 3, 7, 3]$  If `arr` is rearranged as  $arr' = [1, 3, 3, 5, 7]$ , the differences are minimized. The final answer is  $|1 - 3| + |3 - 3| + |3 - 5| + |5 - 7| = 6$ . Sample Case 1 Sample Input For Custom Testing STDIN Function ----- 2  $\rightarrow$  `arr[]` size  $n = 2$  3  $\rightarrow$  `arr[]` = [3, 2] 2 Sample Output 1 Explanation  $n = 2$   $arr = [3, 2]$  There is no need to rearrange because there are only two elements. The final answer is  $|3 - 2| = 1$ .
